Europe Clean Energies (ECE) has started construction on a 2 MW Photovoltaic power project located at the city of Tsukuba Mirai, Ibaraki Prefecture (Japan). The ground mounted PV plant was developed by ECE under the 42 ¥/kWh Japanese Feed-in Tariff scheme and is scheduled to be connected to the Grid by the beginning of September 2014. The project will use ABB power inverters and has been sold to a private investor on a turn-key basis.

In the short term, ECE will begin construction on another two PV parks of 2 MW each at the Ibaraki Prefecture as well.

About Europe Clean Energies:

ECE is a consolidated leading group of Japanese and Spanish Companies that develops and promotes Photovoltaic solar projects in Japan. As a global specialist, ECE covers all the stages of the renewable energy value chain, partnering with key players for the developing, designing, engineering, construction and operation & maintenance of the plants.

ECE is currently working on an extensive pipeline totaling over 500 MW of different kind of PV projects. The Company aims to develop 1,000 megawatts of solar farms in Japan until 2016.
